

POOVARASAN A

Automation Engineer

Madurai, India | 6383626411 | apoovaras.vnb@gmail.com | linkedin.com/in/poovaras-a-b139a5219 | https://github.com/Poovaras-23

SUMMARY

DevOps Engineer with hands-on experience in AWS, Docker, Jenkins, Terraform, CI/CD pipelines, Kubernetes and Linux administration. Skilled in automating deployments, infrastructure provisioning, monitoring and cloud-native application deployment. Passionate about improving deployment efficiency, scalability, and system reliability.

SKILLS

- **Cloud Platforms:** AWS (EC2, IAM, ELB, VPC, S3, EBS, EFS, RDS, DynamoDB, Route53)
- **DevOps Tools:** Docker, Git & GitHub, Jenkins, Terraform, Kubernetes, Ansible
- **CI/CD:** Jenkins Pipelines, AWS CodeCommit, AWS CodeDeploy, AWS CodeBuild, AWS CodePipeline
- **Monitoring & Logging:** Prometheus, Grafana, CloudWatch
- **Operating Systems & Networking:** Windows server, Linux, Networking Basics

WORK EXPERIENCE

HCL Technologies, Madurai, India

Automation Engineer

Feb 2025 – Present

- Worked on CI/CD automation using Jenkins, Git, and Docker to streamline application build and deployment processes in Linux environments.
- Managed AWS cloud infrastructure and automated resource provisioning using Terraform for scalable and reliable deployments.
- Built and maintained Docker images for Java/React applications and deployed them on cloud-based Linux servers.
- Automated deployment workflows to reduce manual effort and improve release efficiency across development and production environments.
- Monitored deployments, resolved infrastructure issues, and collaborated with development teams to ensure smooth application delivery.

Command Centre Engineer

Oct 2022 – Jan 2025

- Supported L1 activities for Windows, Linux, Networking and monitor and manage systems, ensuring smooth operations and timely operations.
- Acts as the first point of contact for operational issues.
- Respond to alerts, incidents and does the first level troubleshooting and coordinate with relevant teams for the resolution.
- Manage the incidents and SLA by timely response. Manage the alerts by creating a alerts suppression task during the downtime activity.

PROJECTS

Reactjs E-commerce Application

- Built and deployed a production-ready React application using AWS EC2, Docker, and Docker Compose.
- Implemented CI/CD pipelines with Jenkins, GitHub, and Docker Hub for automated build and deployment workflows.
- Automated application build and deployment using custom shell scripts and branch-based deployment strategies.
- Configured secure AWS infrastructure with restricted SSH access and public application availability.
- Integrated monitoring and health-check mechanisms with alert notifications for application uptime tracking.

MindTrack Application

- Built and deployed a production-ready React application using Docker, Kubernetes (EKS), and AWS cloud services.
- Implemented end-to-end CI/CD pipelines with GitHub, AWS CodeBuild, and CodePipeline for automated build and deployment workflows.
- Configured Kubernetes deployments and LoadBalancer services using YAML manifests for scalable application management.
- Integrated Docker image storage with AWS ECR/Docker Hub and enabled centralized monitoring using AWS CloudWatch Logs.

EDUCATION

Bachelor of Engineering (B.E.), PSG College of Technology, Coimbatore.

Aug 2018 – May 2022
